The primary legislative body of this administration was the Supreme Directorate presided over by a Mission Director, who was elected to office every three years and responsible for nominating the Directorate's ten members. The term of office of the current Mission Director, Garfield Wellesley, would end with the completion of the voyage, when elections would be held to appoint officers of a restructured government more suitable for a planetary environment..Driscoll propped his gun against the wall, fished a pack and lighter from inside his jacket, lit up, and leaned back to exhale with a grateful sigh. The irritability that he had been feeling wafted away with the smoke. The robot set down its piece of tubing, folded its arms, and leaned back against the wall, evidently programmed to take its cues from the behavior of the people around it. Driscoll looked at it with a new curiosity. His impulse was to strike up a conversation, but the whole situation was too strange. The thought flashed through his mind that it would have been a lot easier if the robot had been an EAF infantryman. Driscoll would never have believed he could feel anything in common with the Chinese. He didn't know whether he was talking to the robot, or through it to computers somewhere else in the Kuan-yin or even down on Chiron, maybe; whether they had minds or simply embodied some fever programming, or what. He had talked to Colman about machine intelligence once. Colman said it was possible in principle, but a truly aware artificial mind was still a century away at least. Now, I wonder what could be on your mind at this time of night."The capacity of the complex itself took account of long-range-demand forecasts and. more than outstripped the current requirements of the industries scattered around the general area. Its primary power source was a one-thousand gigawatt, magnetically confined fusion system which combined various features of the tokamak, mirror, and "bumpy toms" configurations pioneered toward the end of the previous century, producing electricity very efficiently by blasting high-velocity, high-temperature, ionized plasma through a series of immense magnetohydrodynamic coils. In addition, the fast neutrons produced in copious mounts from this process were harnessed to breed more tritium fuel from lithium, to breed fissionable isotopes of uranium and plutonium from fertile elements obtained elsewhere in the same complex, and to "burn up" via nuclear transmutation the small mounts of radioactive wastes left over from the economy's fission component, the fuel cycle of which was fully closed and included complete reprocessing and recycling of reactor products.. "Then invoke the security provisions," Borstein said, shifting in his chair from weariness with the whole business. "It's a security matter, isn't it? The Chironians have left it to us by default, and it's their security at stake as well as ours. The Pagoda's only two years away. Somebody's got to take the helm in all this." But Merrick didn't seem inclined to pursue that side of the matter. "Nevertheless Chironians are getting killed," he said. "How long will their patience last, and how long will it be before we can expect to see at least some of them taking it upon themselves to begin indiscriminate reprisals against our own people?—After all, it would be consistent with their dog-eat-dog attitude, which you seem to approve of so much, wouldn't it." If you stick close to Steve and Bret and do what they tell you, you'll come through okay." Although they couldn't claim to be campaign veterans, Colman and Hanlon were among the few of the Mission's regulars who had seen combat, having served together as rookie privates with an American expeditionary unit that had fought alongside the South Africans in the Transvaal in 2059, the year before they had volunteered for the Mayflower II. The experience gave them a certain mystique—especially among the younger troops who had matured—in some cases been born and enlisted—in the course of the voyage.. Celia smiled over her glass. "Thank you. It's rare to find such appreciation." Colman sighed. "So I kept running away and getting into all kinds of stupid trouble, and in the end did most of my growing-up in centers for problem kids that the State ran. Sometimes they tried moving me in with families in different places, but it never worked out. The last ones tried pretty hard. They adopted me legally, and that's how I got my name. Later we moved to Pennsylvania . . . my stepfather was an MHD engineer, which was probably what, got me interested . . . but there was some trouble, and I wound up in the Army."
